Create a new menu section

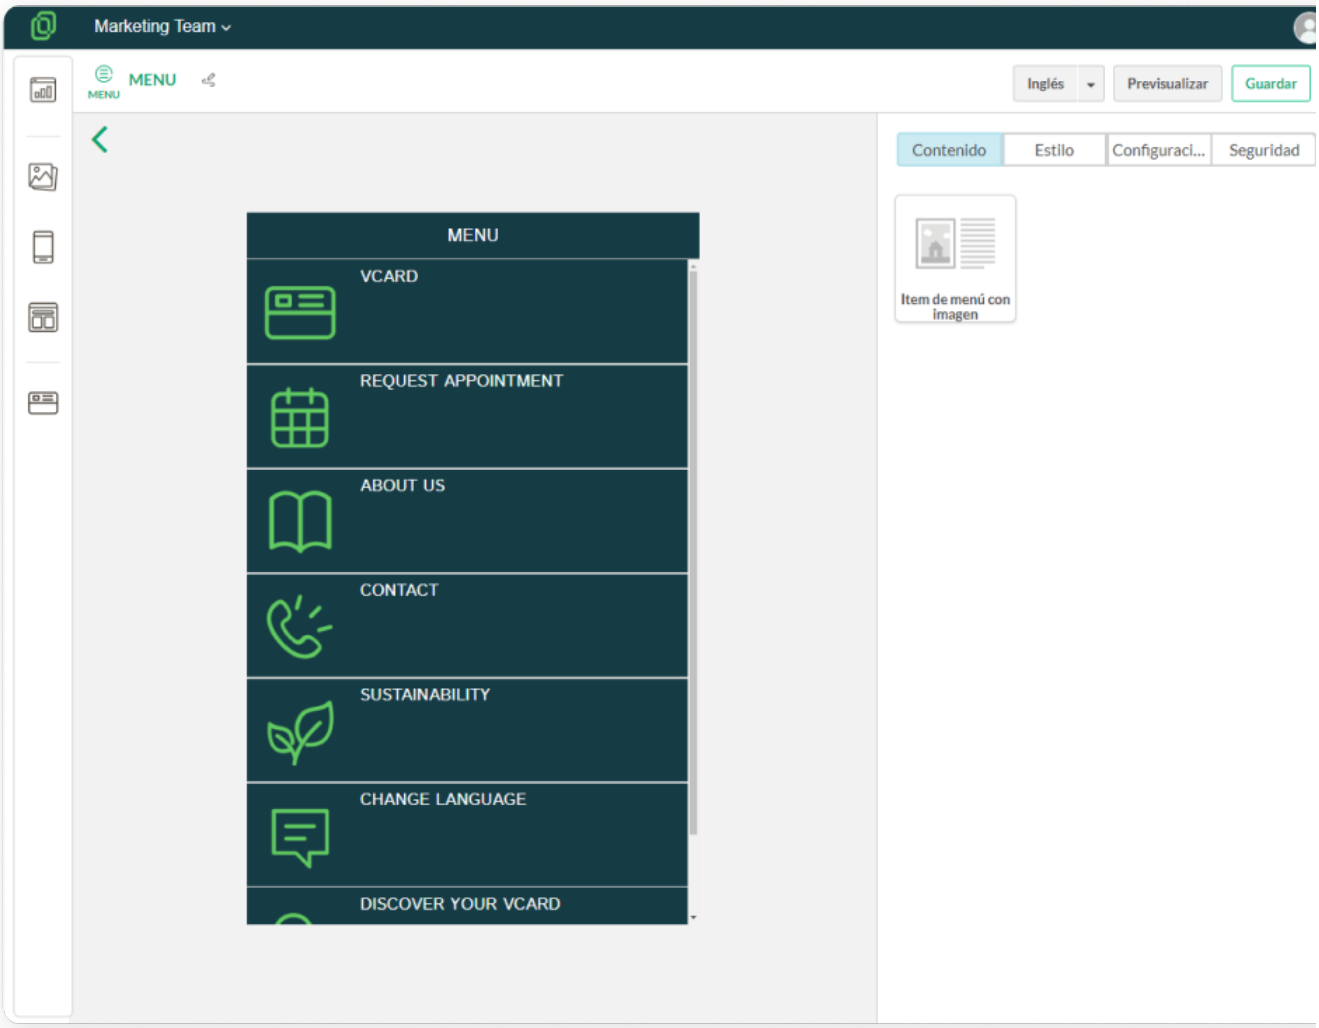

In this article, you will learn how to create a new section in the menu and link it not only to a template but also to a URL, phone number, file, and more. Linking your templates to the menu of your app is the easiest way to access them quickly when opening your vcard.

To create a new section in the menu, follow these steps:

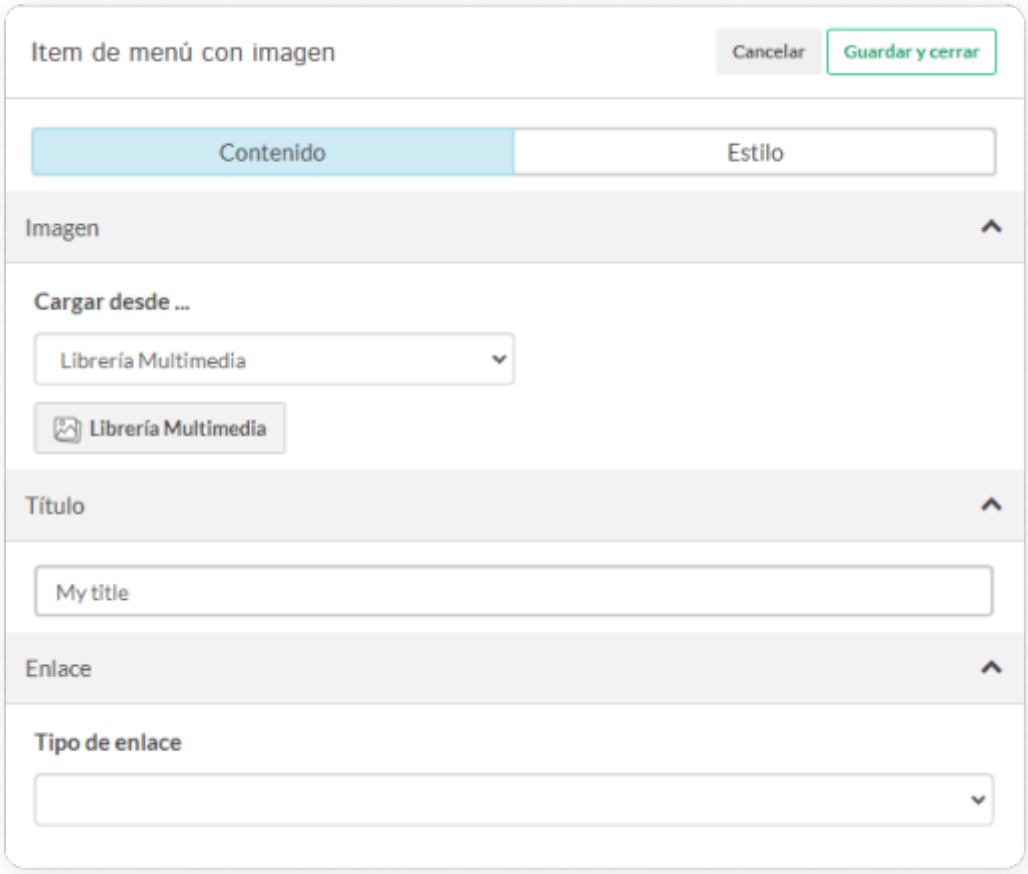

1. Open the **menu of your App** from the Templates section.

2. Once inside the **Template Editor**, you will see your App's menu. From here, you can delete, edit, duplicate existing menu items, or create a new one. To create a new one, drag the **Menu Item with Image** block from the right side of the screen into the **Content block**.

3. Now you have a new menu item. Configuring its content is straightforward:

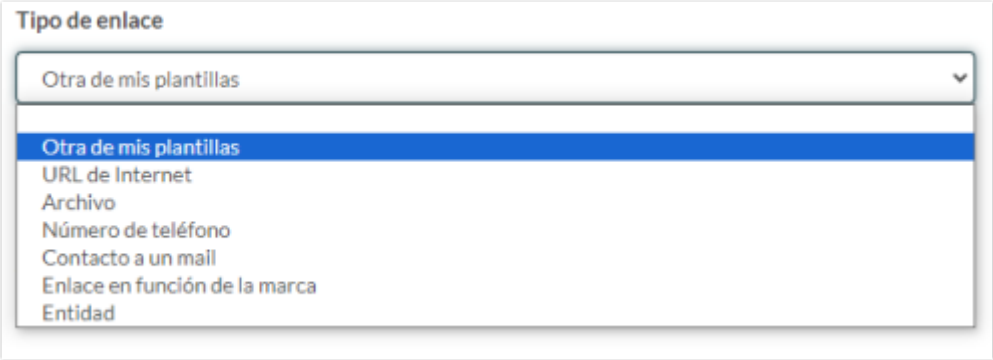

- **Image**: Add an icon for your menu item.

  ?? Remember, for optimal display, the icon should have a square size with a transparent background.

- **Title**: Add the title of the menu item.

- **Link**: Choose what to link this menu item to, i.e., the screen that will open when clicking on this menu section. You have the following linking options: URL, File, Phone Number, Email Contact, Link based on the brand, and Entity.

4. Now that you have created the item, **configure its layout** in the Style section, where you can set the background color and text color.

You're all set! You have successfully created and configured a menu item.
