

Role management

You can **edit the roles of team members** to decide what kind of **permissions** these members have.

To manage team member roles, follow these steps:

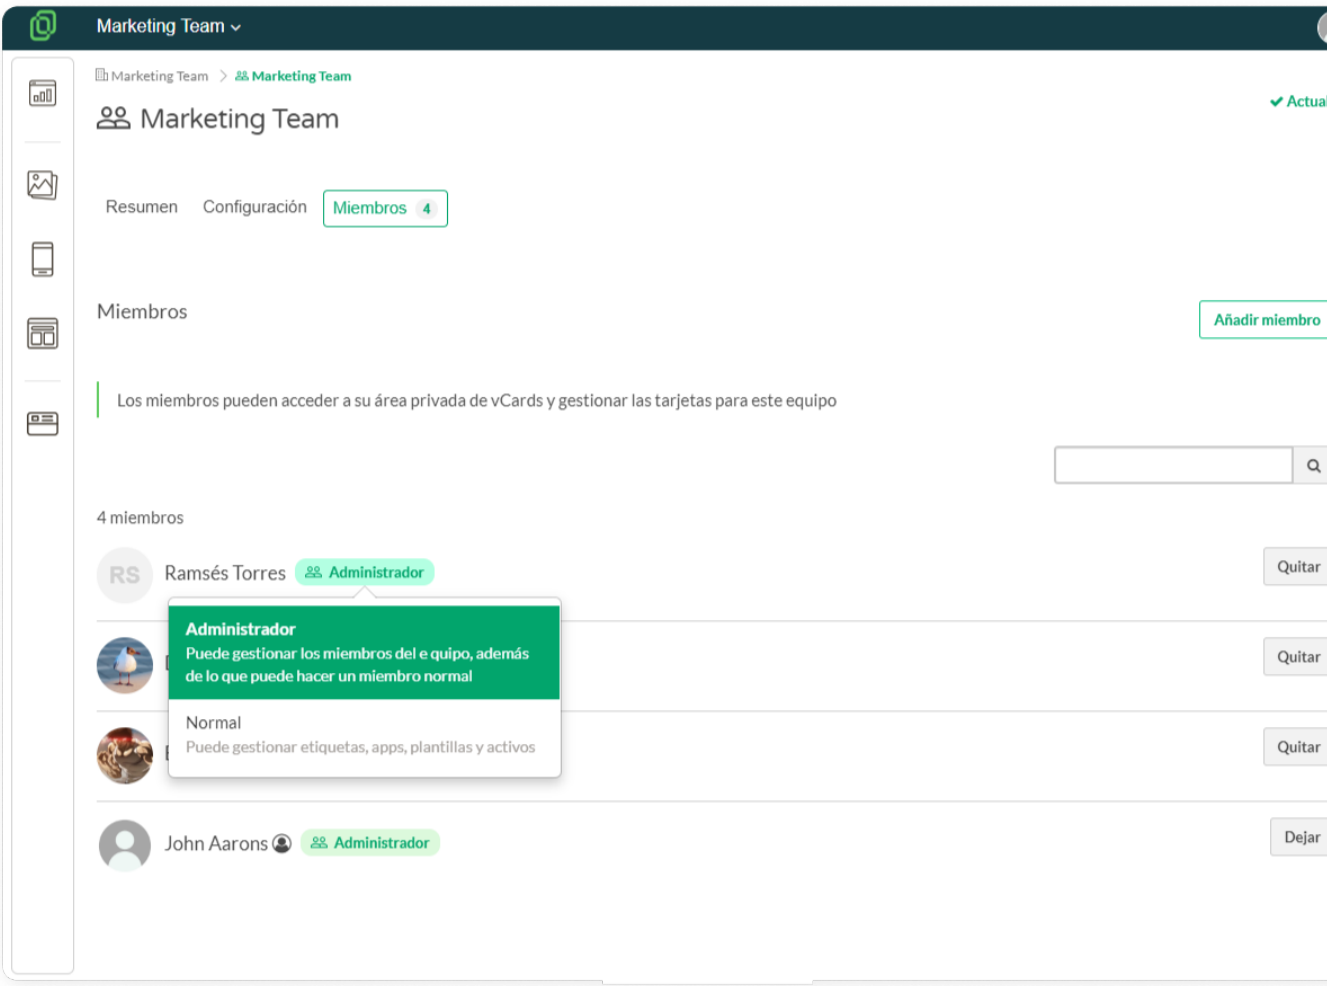

1. Access the **Users** section from your team's dropdown menu.

2. Click on the **user tag**, and choose the preferred role type for the user:

Administrator: Can manage team members, in addition to what a normal member can do.

Normal: Can manage labels, apps, templates, and cards.

All set! You have successfully modified the role of a user in your team. ?
